iPURPOSE × SDSN YOUTH AFRICA

Ghana Discovery Pilot with Africa Replication Pathway

An 8-week pilot connecting self-discovery, AI-guided decision support, and verified local pathways into education, employability and entrepreneurship.

Proposed: 100 SDSN Youth participants

Initial pilot fee: waived

8 weeks

Prepared for exploratory partnership discussion

Renita Hamilton, MPS — Founder, iPurpose

Strategic Leadership · Social Impact · AI-Enabled Human Development

Why Ghana. Why now.

The demographic need and digital-policy direction are converging.

36.9%

of Ghana's projected population is age 15–35.

21.9%

average unemployment among people age 15–35 in the first three quarters of 2025.

2025–2035

Ghana National AI Strategy: human capital, education, local relevance and practical AI adoption.

The opening for iPurpose is not simply "career matching." It is helping young adults translate self-knowledge into an actionable next step inside a rapidly changing economy.

Identity + Decisions + Local pathways + Follow-through

Why SDSN Youth Africa is the right regional partner

The regional network combines local youth leadership, institutions and cross-country collaboration.

Regional network reach

SDSN Youth Africa connects national and regional youth networks with local coordinators, institutions and cross-country collaboration.

Direct mission fit

The network mobilizes young people to contribute practical solutions, with strong alignment to Quality Education, Decent Work and Reduced Inequalities.

2026 employability activity

SDSN Youth Ghana joined Kenya, Nigeria, South Africa, Cameroon and Benin in a three-day “Empowering Youth for Employability” program in May 2026.

iPurpose is proposed as a continuation layer:

- help participants understand themselves
- translate learning into personalized next steps
- connect to verified Ghana opportunities
- continue receiving guidance after a workshop ends

The gap iPurpose is designed to fill

From one-time insight to ongoing navigation.

CLARITY	PURPOSE	COMPASS	OPPORTUNITY	ACTION
What is happening in my life?	What strengths, interests and patterns are emerging?	What should I explore or do next?	Which verified Ghana-specific pathways fit?	What did I actually do — and what comes next?

The differentiator: iPurpose stays with the student after the assessment and can support repeated decisions over time.

The partnership ask

A small, evidence-building collaboration will grow only if the results justify it.

Would SDSN Youth Africa be open to exploring an 8-week iPurpose pilot beginning in Ghana with up to 100 participants, designed as an evidence-building first step for potential replication across additional African youth networks?

If there is mutual fit, we would jointly refine the Ghana cohort, safeguards, local opportunity layer, evaluation plan and regional learning approach before recruitment begins.

30-minute exploratory conversation

No long-term commitment

Primary outreach: Lara Mugala, Regional Focal Point, Africa. Proposed first implementation: Ghana, coordinated with SDSN Youth Ghana and participating host institutions.

Proposed 8-week iPurpose × SDSN Youth Africa Pilot — Ghana launch cohort

Small enough to learn quickly. Structured enough to produce useful evidence.

SDSN Youth cohort: 100 participants

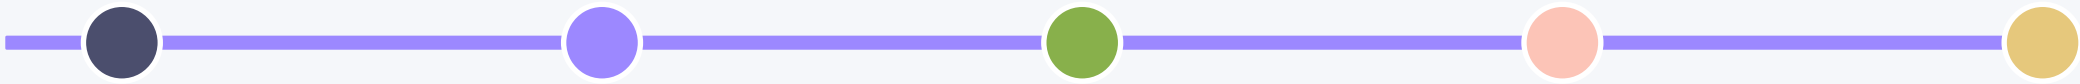

Ghanaian university students, recent graduates and young professionals age 18+ recruited with SDSN Youth Ghana and participating host institutions.

Open comparison: 50 participants

A separate independently recruited Ghana cohort helps distinguish network-distribution effects from broader product demand. No SDSN recruitment responsibility.

Weekly learning loop

Usage analytics + short check-ins + selected interviews reveal where language, recommendations, product flow or local context needs adjustment.

Week 0
Baseline

What SDSN Youth Africa receives

The pilot should create value for participants and useful evidence for the network.

Student access

Full pilot access to the iPurpose experience for the agreed SDSN Youth Ghana cohort.

Localized pathway layer

A Ghana-focused starter library of verified education, career, entrepreneurship and skills opportunities.

Pilot analytics

Aggregated funnel and engagement measures showing how students move from onboarding to action.

Student feedback

Structured qualitative feedback on usefulness, cultural fit, employability navigation and unmet needs.

Closeout report

A concise readout covering outcomes, lessons, recommendations and whether wider network testing is justified.

Co-design influence

SDSN Youth Ghana feedback helps shape how iPurpose serves young Africans before broader regional expansion.

Proposed pilot fee: WAIVED for the initial 8-week evaluation, subject to mutually agreed scope, safeguards and data/compliance requirements.

What we would ask of SDSN Youth Africa

A deliberately light network lift.

1 Designate one liaison	A primary contact for scope, scheduling and coordination with participating institutions.
2 Recruit up to 100 participants	Preferably university students, recent graduates and young professionals age 18+.
3 Support one orientation	A short virtual or hybrid launch session explaining the pilot and participation expectations.
4 Participate in two feedback touchpoints	Mid-pilot check-in and end-of-pilot review with relevant SDSN Youth Ghana and institutional representatives.
5 Advise on Ghana relevance	Flag missing pathways, terminology, youth-development context or partnership opportunities.

Not requested: funding, procurement, exclusivity, endorsement, or a long-term commitment before evidence is available.

How success will be measured

Downloads are not the goal. Progress from uncertainty toward action is.

Activation

% completing onboarding

Self-discovery

Clarity / Purpose completion

Compass use

Repeat AI-guided navigation

Retention

Week 2 / 4 / 8 return

Opportunity

Verified pathway clicks

Action

Reported real-world next steps

Core outcome question

“How clear are you about what you should do next?”

Measured at entry and again at closeout.

Guardrails: student support, privacy and trust

The pilot must be useful without blurring the line between AI guidance and professional services.

Decision support — not counselling

iPurpose will not be positioned as a mental-health service, diagnostic tool, or replacement for professional counselling or career services.

Verified local opportunities

For Ghana-specific programs and opportunities, verified sources should take priority over model memory; uncertain information is clearly labeled.

18+ initial cohort

The first pilot avoids additional minor-consent and safeguarding complexity while product-market fit is being established.

Data minimization

Collect only what is needed for the experience and pilot evaluation; clearly state purpose, retention and deletion choices.

Aggregated reporting

SDSN receives cohort-level findings; individual participant content is not casually exposed through network reporting.

Compliance review before launch

Cross-border processing, consent, controller responsibilities and Ghana data-protection requirements are confirmed before recruitment.
